

SAVING ENERGY & LIVES: GREEN HOSPITALS

www.clarkenergygroup.com

Hospitals consume energy at twice the rate of commercial office buildings and at three times the rate of schools.

ENERGY INEFFICIENCIES IN MEDICAL FACILITIES

Hospitals and other medical facilities are burdened with rising utility costs and significant energy inefficiencies, reducing the focus where it is needed most—on patient care. These facilities represent some of the nation's most energy intensive buildings and provide a great opportunity for energy efficiency upgrades. They are ideal candidates for an energy overhaul, including some combination of energy efficiency measures, renewable energy installation, water conservation measures, and infrastructure enhancements.

MANAGEMENT EXPERTISE

The Clark team has significant expertise in managing projects with mission-critical energy needs. We are adept at maintaining building operations while implementing energy projects so that your medical facility can continue to serve patients in need. Our understanding of high-performance buildings such as hospitals, laboratories, clean rooms, and other medical-related facilities allows us to optimize energy savings with a wide range of energy conservation measures.

CLARK CAN MEET YOUR CHALLENGE

Under an Energy Savings Performance Contract (ESPC) or similar financing vehicle, Clark can implement energy saving measures in your building without requiring any upfront costs. If an ESPC is not appropriate for your facility, we can use other financing mechanisms to ensure that you receive the most comprehensive and effective energy solutions.

OUR HEALTHCARE ADVANTAGE

At Clark Energy Group, we have the experience working with both medical facilities and energy systems to offer creative packages of solutions that suit your needs. Whether this involves a simple replacement of inefficient lighting systems or a more complex combination of HVAC system upgrades and building envelope modifications, Clark is well suited to provide both the design and construction expertise required for the success of your project. We have capabilities in both existing building retrofits and new construction, so no matter where you are in the life of your building, we can help.
